Mountain vistas make perfect photographs

Ever since the day that Ansel Adams took his famous photograph The Tetons and the Snake River, photographers have been flocking to Jackson Hole, Wyoming in search of the classic scenic photograph.

A land rich in beauty the valley floor is surrounded by three mountain ranges creating a geographic “triple.” Combine that with the largest town in the valley, Jackson, and you get a region that encompasses 48 miles in length and 8 to 15 miles wide. It includes Grand Teton National Park, Bridger Teton National Forest and creates the southern border of Yellowstone National Park.

The center of attention in the valley is the Grand Teton Mountain Range, which owe much of their beauty to the dramatic 7,000 ft rise out of the valley floor without the presence of foothills to diminish the contrast of the scene.

An abundance of wildlife including: elk, moose, bear, wolf and deer, and antelope, also adds to the allure for photographers.
